ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1921-22.

I.—GENERAL.

A.—Details of Direct Expenditure.

In the year 1921-22 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 138 lakhs compared with Rs. 111½ lakhs in the previous year, and Rs. 96 lakhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows:—

	Deccan and Gujarát.	Sind.	Total.
	Rs.	Rs.	Rs.
Works ...	45,16,132	12,27,128	57,43,260
Repairs ...	5,96,169	38,77,527	44,73,687
Establishment ...	14,32,685	17,80,043	32,12,728
Tools and Plant ...	1,50,331	1,87,447	3,47,218
Other charges ...	5,580	.....	5,580
Gratuitous Relief ...	.....	.....	.....
Suspense Account ...	—1,18,399	1,59,183	40,784
Receipts and recoveries on Capital Account ...	— 12,827	— 65	—12,892
Receipts and recoveries on Revenue Account ...	— 295	—2,915	— 3,210
Total ...	65,79,347	72,38,268	1,38,07,615

2. The distribution of the above expenditure under several Irrigation heads is given below:—

Heads.	Amount.	Remarks.
	Rs.	Rs.	
Capital Account—			
Productive Works	7,69,317		
Unproductive Works	42,36,351		
		50,05,668	Provincial.
Revenue Account—			
Productive Works	24,43,374		
Unproductive Works	13,44,797		
		37,88,171	Do.
Works for which no Capital Accounts are kept—			
1. Works for which only Revenue Accounts are kept ...	17,90,504		Do.
2. Works for which neither Capital nor Revenue Accounts are kept—			
Irrigation Works	25,02,007		Do.
Contribution Works	19,661		Deposit works.
3. Miscellaneous Expenditure	33,634		
		43,46,806	Provincial.
Famine Relief outlay on Irrigation Works	6,67,770		Do.
Grand Total ...		1,38,07,615	

B.—FIGURES FOR WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.

3. The receipts on Capital Irrigation Works compared with the year's working expenses show a profit of Rs. 19,38,024 and Rs. 15,00,878 in Sind and the Deccan and Gujarát, respectively. If however interest charges on works in operation are taken into account the result shows a profit of Rs. 8,12,995 for Sind and a loss of Rs. 3,04,335 for the Deccan and Gujarát :—

Class of works.		Direct Receipts.	Indirect Receipts.	Total Direct and Indirect Receipts.	Direct expenditure.		
					Capital.	Working expenses (including the share of collection charges).	Total.
WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Productive	Deccan and Gujarát.	6	3,596	3,602	...	3,183	3,183

C.—FIGURES FOR WORKS FOR WHICH NO CAPITAL ACCOUNTS ARE KEPT.

5. These may be works for which only Revenue Accounts are kept, or works for which neither Capital nor Revenue Accounts are kept or miscellaneous works. The receipts on these works are principally in the form of a share of the Land Revenue and are termed "Indirect" and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the Statistical Statements accompanying the Irrigation Administration Report, are very small, being for direct

revenue only, *viz.*, proceeds from sale of water, etc. The area of irrigation on these very numerous works is always large, but it fluctuates to some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures:—

Class of works.	Revenue.			Expenditure.	Net Revenue.
	Direct.	Indirect.	Total.		
Works for which no Capital Accounts are kept.	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which only Revenue Accounts are kept. Deccan and Gujarát	38,578	5,03,961	5,42,539	2,88,896	2,53,643

D.—REVIEW OF IRRIGATION.

Description of Irrigation.

6. The conditions of cultivation in Sind are entirely different from those in the Deccan and Gujarát. In Sind the rainfall is usually negligible and the cultivation depends almost entirely on canal irrigation which is dependent on the inundation of the river Indus.

Inundation and rainfall in Sind.

7. The inundation of 1921 though late was on the whole very satisfactory. The rainfall was general and did much good to cultivation.

Irrigation and rainfall in the Deccan and Gujarát.

8. In the Deccan and Gujarát the cultivation depends upon rainfall and the tanks and canals are useful for the purpose of growing more valuable crops or to counteract, if necessary, the evil effect of a deficient or irregular rainfall. The irrigation schemes in this part of the country involve the construction of storage reservoirs and are

costly in comparison with those in Sind. In Gujarát the monsoon which started late was greatly in excess of the average of the past years and was on the whole favourable. In the Deccan however it was not satisfactory as in addition to its late arrival it stopped early.

Area irrigated and gross revenue.

9. The area irrigated in Sind during the year was a little over 3¼ million acres as against 3 million acres of the previous year and the gross revenue amounted to Rs. 85½ lakhs against Rs. 63½ lakhs of the previous year.

10. The total area irrigated in the Deccan and Gujarát was 422,000 acres against 431,000 acres of the previous year and the gross revenue amounted to Rs. 31¼ lakhs against Rs. 28½ lakhs of the previous year.

II.—SIND.

1.—NATURE OF INUNDATION AND RAINFALL.

Character of the Inundation.

11. The inundation of 1921 though late was on the whole very satisfactory. The peculiar feature of the year was the sustained low level during June and the first half of July, but the steady rise from the middle of July to the end of August entirely changed the situation. In the beginning of the season, rotations, where regulators existed, were resorted to, with a view to distribute equitably the supply available for rice seedlings and transplanting. The river commenced to rise by the middle of July but did not reach the fair irrigating level of 13 feet on the Bukkur gauge till the first of August. This level and above was registered for a period of 28 days, as compared with 30 days in the years 1919 and 1920, *nil* in 1918 and 20 days, the average of the previous triennium.

12. The fair irrigating level of 17 feet on the Kotri gauge was first recorded on the 23rd July and this level and above was maintained for a period of 55 days as compared with 49 days in the previous year, 81 days in 1919, 89 days in 1918, and 56 days, the average of the previous three years.

13. The highest readings for the year were 16·8 feet on the Bukkur gauge on the 10th August and 22·1 feet on the Kotri gauge on the 27th August, as compared with 15 and 21·4 feet on the Bukkur and Kotri gauges, respectively, in 1920 and the recorded maximum readings on these two gauges of 17·9 feet and 23·8 feet, respectively.

Rainfall.

14. The rainfall was general and at such times that cultivation was considerably benefited.

2.—INDUS RIGHT BANK DIVISION.

(i) WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.

Desert Canal.

15. The Desert Canal was opened on the 15th May 1921 and it ceased to flow on 21st January 1922.

16. The course of the river at the mouth of the canal and for a certain distance above and below it continued the same as at the end of the inundation of 1920, although there was active erosion in places. From the middle of July to the end of August the water-level steadily increased and the kharif crops matured very well. The excellent river during September enabled a large area to be watered for rabi of which a large area was sown. The whole canal with its branches worked most satisfactorily. The full supply gauge reading of 10 feet or more was maintained for 28 days.

17. The Adiowah was opened on the 1st June with a gauge reading of 1·3 feet at its head. It ceased to flow on the 11th September 1921. Due to the low river in June the distributary did not flow till the 17th June. The water level, however, increased steadily and gave a very good supply both in the Adiowah and its distributary. This canal waters much high level land and its successful working is always therefore doubtful. The unusually heavy hill torrents in August cut both banks of the Adiowah, damaged some of the crops and silted up the canal in the first 4 or 5 miles. The canal consequently ceased flowing early and some crops failed to get a last watering. Had the torrents not occurred, the Adiowah would have enjoyed its best year since 1914.

Unharwah.

18. The Unharwah was opened on the 25th May with a gauge reading of 3·3 feet on the Head Regulator and ceased to flow on the 21st October 1921. In the beginning of the season the canal was fed by a Dhand taking off a bye-river, the head of the Dhand being 4 miles from the mouth of the Unharwah. In the last week of August the river however changed its course and the Unharwah Dhand is now fed directly from the main river. This canal had a very good season.

19. The Haibat loop, the Right Bank of the Unharwah and a small bank running upstream along the edge of the Unharwah Dhand form a compartment for impounding water let into it from the river. Water was allowed to flow from this compartment into the Unharwah on the 28th September and it continued to flow until the 21st October. This water was very beneficial to the kharif crops and for increasing the area under rabi.

20. The full supply level of 10 feet or more was obtained for 45 days.

21. The Begari Canal was opened on the 20th May with a gauge reading of 4 feet at the old Head Regulator and it ceased to flow on the 15th November 1921. The channel feeding the Begari was canalized by single groynes which resulted in scouring the silt deposited in it during the abkaiani of 1920, and on the whole the canal worked excellently. Begari Canal.

22. The Choi Branch of the Begari Canal takes off from mile 6, *i.e.*, just above the Choi Head Regulator. It silts badly. To give full supply to this branch a gauge reading of 12 feet has to be maintained upstream of the Choi Regulator.

23. Rotations were ordered in June and July when the river was low, and in September and October in order to distribute water properly. The crops were generally very good almost 50 per cent. of the Kabuli area being cultivated.

24. Every effort was made to improve the supply in the two branches Eden and Sirwahs which suffer from chronic deficiency. They worked fairly well. Two feet of clearance had been done in the tail of the Begari and further clearance in the heads of the Eden and Sirwahs during the working season of 1920-1921, and this improved matters.

25. Towards the end of the season, a rotation was given at the 47th mile regulator which saved the high lying kharif crops in the reach just above the regulator.

26. Full supply gauge reading or more was maintained for a period of 40 days, which was a very good record.

27. The new right bank bund commenced last year was completed during the year at a total cost of Rs. 1,45,594.

28. The Mahiwah was opened on the 26th May and ceased flowing on 9th October 1921. The whole Mahiwah system worked satisfactorily throughout the season. Mahiwah.

29. During the inundation there was active erosion at the head of the Masuwah which continued till the end of September with the result that there was deficiency of water along this canal. This deficiency was however overcome by letting the Mahiwah water into the canal. The main current is now about 600 feet away from the Masuwah head and no further erosion is anticipated.

30. The proposal to abandon the project for remodelling the Sehar Canal is still under consideration. Sehar Canal.

31. The Sukkur Canal has two heads, one Rahuja and the other the old head. Rahuja head gets its supply from Dhoro B, which is fed by the bye-river just near Rajib canal head. It has been given a new mouth this year at a cost of Rs. 12,735. The Dhoro which has been canalized by constructing single and double groynes, worked very satisfactorily. The Rahuja head was opened on 23rd May 1921 and worked very satisfactorily. The gauge at Shikarpur Road bridge maintained its full supply level and above for 35 days against 39 days last year. The gauge reading of 18 feet and over was maintained for 21 days. The maximum gauge reading during the year was 18·1 feet on 12th August 1921. The Rahuja head stopped flowing on 12th November 1921. The old head was however opened on 29th September which helped to mature the kharif crops as well as gave rabi supply and was closed on 28th March 1922. Sukkur Canal.

32. The canal was widened to a certain extent from mile 10 to 23. The old head was also widened in order to increase the discharge required for rabi cultivation.

33. The two branches Kur Khairo and Kur Biro worked fairly satisfactorily. There were no complaints except at their tails which are being improved.

34. The Ghar Canal was opened on 15th May 1921, when Bukkur read 4·1 feet. The gauge at its head rose to 12·8 feet maximum on the 10th August against 12·4 feet of the previous year and 12·7 feet of 1919. The Larkana gauge was allowed to go up to 16·7 feet as compared with 16·5 feet of the previous year. The full supply level of 16·0 and over was allowed for 28 days only as compared with 45 days of previous year. The higher level was not let down for fear of breaches in Kambar Subdivision. The canal worked satisfactorily and ceased flowing on 14th October 1921. Ghar Canal.

35. The Ghar Dhand which has been canalized to a great extent, worked very satisfactorily. The work of constructing groynes to further canalize the Dhand was continued this year and it is proposed to continue it next year also. The river receded at the end of this year's inundation by about half a mile just opposite the mouth of the Ghar Dhand leaving a new Dhand about 1¼ miles below it. This new Dhand got back water up to 3·5 feet on Bukkur gauge from its downstream end.

36. The Fordwah, which is a feeder to the Ghar Canal, was opened on 1st June but had to be kept partially closed so as to keep about 16·0 feet at the Larkana gauge for fear of breaches in Kambar Subdivision. It ceased flowing on 19th November 1921.

37. The Naurang and the Nurwah into which the Ghar Canal bifurcates at its tail started flowing on 26th May. The maximum reading was 13·4 feet on 16th August 1921 against 13·0 feet of the previous year. The full supply level of 12·0 feet and over was maintained for 43 days against the same number of days of the previous year. Both the canals worked satisfactorily and ceased flowing on 19th November 1921.

38. The proposal to construct a Head Regulator over the Naurang and the Nurwah has been held in abeyance as they will be affected by the proposed Right Bank Canal of the Sukkur Barrage Project. The work of providing stone-pitching at their heads in order to rectify bad scour and of removing bends along mile 2 and $\frac{3}{4}$ of the Naurang was also carried out this year.

39. The Nasrat *ex*-Ghar which takes off from the Ghar Dhand was opened on 27th May and ceased flowing on 9th October 1921. The maximum readings were 12·0 feet upstream and 10·5 feet downstream at its 2nd mile regulator. The full supply level of 10·0 feet and over was maintained for 17 days. The new Nasrat extension was completed in March 1922 at a cost of Rs. 47,398, the expenditure during the year being Rs. 17,798. The result of the working of this extension will be known after the inundation of 1922.

Sattah Canal.

40. The Sattah Canal takes off from the Naro which is fed from the Indus on the left bank. It has a length of 26 miles and passes through Jati and Shahbunder talukas.

41. The canal was opened on the 21st June 1921 when Kotri read 13·3 feet. A new mouth was given to the canal last year which worked very *well* in the beginning of the inundation; but when the river overtopped its banks, the river spill crossed this new channel and completely silted it up. The river *spill however gave* the canal a sufficient supply. The channel has been thoroughly cleared this year.

42. The crops on this canal were exceptionally good. In the first 8 miles the land is very low and the karias draw off all the water they can. There is practically a continuous flow of water through the rice fields at this place and the tail gets little water. Any extra quantity let down the canal has no effect on the supply at the tail till the karia sluices are reduced. The duty on the canal is about 10 acres per cusec due to consumption of excessive supply in the upper reaches through large karia heads.

(ii) Works for which only Revenue Accounts are kept.

43. The principal canals under this head are the Sind, Western Nara, Pritchard, Pinyari, Kalri and Baghar Canals, but the question of classifying them as Capital works is under consideration.

Sind Canal.

44. The Sind Canal was opened on 24th May and ceased flowing on 7th October. The whole canal system worked well. There were 2 breaches in Cut No. 1, Sind Canal, mile 18/6 to 21. A little damage, was done to the kharif crops but it was more than counterbalanced by the increase in rabi cultivation.

45. The season in the beginning was dull and unsteady and the people did not undertake much cultivation with the result that the crop was mostly late. The kharif sowings though retarded were carried on vigorously with the rise in the river and the total area was about normal. Late rise in the river affected the area under rice. Rabi cultivation was more extensive than usual.

Western Nara.

46. The canal was opened on 21st May but the Head Regulator was kept partly closed to let down water gradually. On the same date the gauge read 9·7 feet and 4·0 feet on Up and Down stream, respectively, corresponding with 4·1 feet at Bukkur. The Regulator was fully opened only on the 7th June and was kept so till the first of August, when the gauge read 13·1 feet, which was 3 feet over the full supply reading of 12·8 feet. It was proposed to let down more water gradually and as much as the banks could safely hold, with a view to make up the deficiency in Mehar Subdivision. The Abad bund however breached on the night of 3rd August and although the reading on the downstream gauge of the Head Regulator was raised to 13·3 feet on the 5th August, it was considered necessary to cut off the supply and be prepared in case the breach water found its way into the Nara. This did happen, but as the Nara was already reduced, the breach water entering the canal at the 28th mile did not do any damage and was safely carried by the canal.

47. As usual the supply in the beginning of the season when much water is not needed in the upper reaches, was fairly good in the Mehar Subdivision, but as soon as the karias in the upper reaches of the canal were opened the water-level in Mehar Subdivision fell rapidly, and the gauge at the 83 mile was dry from the 14th June to 31st July. Water could only be sent down to this portion of the Nara by resorting to rotations in Labdaria, Dhamrao and Mehar (Upper reaches) Subdivisions. These rotations continued from the 25th June to 3rd August and were only stopped on account of good rains. Rotations were again started on the 19th September when all the big branches of this canal upstream of Kakolwah were closed for the benefit of this Subdivision. The cultivation of lands in this portion of Nara from mile 78 to 89 is very precarious and depends largely on rotations for maturing it.

48. The new Feeder to the Western Nara which was excavated in the year 1893 seems to have worked well up to 1903-1905, but has proved a failure since the new Akil Mouth to Nara has been excavated. It tails into the Nara at mile 83 where the water-level is generally higher than that in the Feeder itself. The canal has silted to a great extent and is not very helpful as a feeder. Proposals to separate the Feeder from the Western Nara and improve the supply in Mehar and Kakar Talukas are being investigated with a view to prepare a project.

49. The Pritchard Canal is at present receiving its supply direct from the main channel of the Indus. There was no erosion at its mouth during the year under report. There was some silt in the upper reaches of the New Cut which is 6 miles in length and this was cleared out in the cold weather (1922). The canal was opened on the 30th May and ceased to flow on the 10th October, having attained a maximum gauge reading of 13·7 feet on the upstream side. It has a designed discharge of 2,000 cusecs and during this inundation the maximum discharge was 2,017. Regulation was carried out on the 2nd Head Regulator to benefit the New Waburwah which received its supply direct from the Pritchard Left Bank this year. The Regulator was partially closed from 3rd August to 10th September 1921 as there was sufficient water in the lower reaches. This seems to have silted the channel as the canal stopped flowing when Bukkur was reading 4 feet instead of 2 feet or less as in the past 3 years. Pritchard Canal.

50. At present there is a cross regulator at mile 21/2 above which Juberji branch and escape channel take off. The Regulator was closed only for 2 days during the inundation season to help the crops on the Juberji, the tail of the Kudanwah and 5 miles of the Pritchard above the Regulator. The maximum gauge obtained on this Regulator was 11·2 feet against the designed full supply of 10 feet. The Regulator was also closed from 4th to 11th August to relieve the Western Nara from the extra water brought down by hill torrents in Dadu Subdivision. Several leaks occurred in the banks of the canal below 13th mile but they were immediately closed.

51. The branch canals worked satisfactorily.

52. The Pinyari Canal is 67 miles long and is the chief source of supply in the Mirpur Bathoro, Sujawal and Jati Talukas. It flowed on 27th April 1921, with gauge reading of 4·5 feet at its head. The canal carried full supply level of 13 feet and over steadily from 23rd July to 13th September, *i.e.*, 53 days against 47 days of last year. In the beginning of the season the branches in the upper reaches of the Pinyari suffered from deficiency and rotation was adopted at the Daro and Shorewah Regulators to help transplantation. At the tail of the Pinyari there was sufficient water throughout the season, resulting in bumper crops. Pinyari Canal.

53. The Kalri Canal takes off from the river on its right bank near Luka and runs south-west through the middle of Tatta Taluka and tails into the Mirpur Sakro Taluka. It was opened on 23rd June 1921 when Kotri was 13·9 feet and flowed with a depth of 4 feet of water. It worked very well throughout the season and stopped flowing on 6th October when Kotri read 12·9 feet. The full supply of 13 feet and over was maintained for 43 days against 40 days of the previous year. The crops on the canal were quite satisfactory. Kalri Canal.

54. The Baghar Canal is one of the deltaic mouths of the river Indus and takes off its right bank near Aghimani. It is 93 miles in length and passes through Tatta, Mirpur Sakro, and Ghorabari Talukas and tails into the sea through Sheikha creek. It began flowing on 10th May with 5·4 feet of water at the head when Kotri read 9·0 feet and continued flowing till 18th November 1921. Owing to the late rise in the river, the branches flowed late and some of the rice seedlings which could not get water in time withered. A regulator at the head to cut off surplus water and avoid breaches in the canal banks, is under contemplation. Baghar Canal.

55. The following are the principal works which were in progress or carried out during the year under report:— Works in progress or completed.

Works in Progress.	Expenditure during 1921-22.
Karachi Canals District.	
	Rs.
Constructing a Head Regulator over Mahmudawah	9,244
Raising and strengthening Baghar Uchito bund	1,08,689
Raising the Belo loop	99,125
Raising and strengthening M. S. Bund Rajwah to Gungri ...	47,507
Do. do. Gungri to Khanto ...	27,423
Constructing New Thahimani Gulel loop	82,193
Western Nara District.	
New head to Upper Nurwah	4,395
Raising and strengthening Abad bund	15,047
Begari Canals District.	
Constructing new Araz loop to Sukkur Begari bund miles 17 to 21 (S. C.)	3,47,990
Ghar Canals District.	
Improving the Rajana Agani bund	7,670

WORKS COMPLETED.

	Rs.
Karachi Canals District.	
Constructing a head Regulator over Ghar Marho	1,096
Excavating escape channel from Karo Gungro	37,097
Western Nara District.	
Purchase of Local Fund Bungalow at Radhan	11,500
Shikarpur Canals District.	
Constructing a rotation Regulator in mile 7/4 of Mahesro Canal .	2,405
Removing a bad bend below miles 18/2 to 21/6, Sind Canal ...	8,019
Acquiring land for removing bends along Sind Canal ...	12,883
Acquiring land for removing bends along Garang and Chitti Canals	4,162
Begari Canals District.	
Trenching Gouspur loop	31,168

3.—INDUS LEFT BANK DIVISION.

(i) WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.

56. The canals in the Left Bank Division fall under two groups, *viz.*, (*a*) the Eastern Nara system and (*b*) Canals taking off direct from the Indus.

57. Under (*a*) are the Nara River, the Jamrao, Mithrao, Khipro, Thar and Hiral canals, all of which except the Khipro Canal, which flows during the inundation only, are perennial. The Thar canal is however closed on or about the 1st December each year to save the land under command from being water-logged.

58. Under (*b*) are the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals which are all classed as inundation canals though the Fuleli receives a fair rabi supply.

(*a*) *The Eastern Nara System.*

Nara Supply Channel.

59. The Nara Supply Channel is an artificial cut 12 miles in length, taking off the river Indus on its left bank above Rohri and forming the mouth of the Nara. Its discharging capacity is above 20,000 cusecs during high inundation. The Nara river below the channel has no regular banks and the result is, that when the discharge in the channel exceeds 5,000 cusecs, the water overtops the banks and touches the Flood Diversion Bund on the east and the hills on the west.

60. In the previous year the Channel was closed and cleared in a width of about 50 feet in the first 28 miles and its bed was kept about 3½ feet higher at the Head Regulator than its sill and given a gradient of 1 in 15,000 for ensuring a fair supply of water in the early part of the kharif season of the year under report for cotton and rice crops on the Jamrao and other canals depending on it. The left bank of the Channel was also extended by means of a stone pitched groyne by about 1,500 feet with a view to prevent silt from being deposited in the beginning of the inundation of 1921 when erosion was expected on the left bank. The channel was opened on 3rd March 1921 with a discharge of 230 cusecs and worked fairly well till about the middle of May when owing to active erosion on the left bank of the river it began gradually to silt up until in the first week of June the waterway was reduced to about half notwithstanding a rise of 6 inches in the river. As the river was late in rising the average discharge at head of the Channel which was silted up was about 2,400 cusecs in May, about 4,000 cusecs in June and the first half of July. In the latter half of July when the Bukkur gauge rose to 11 feet the Channel scoured and the discharge increased to 8,000 cusecs. It went up to 14,000 cusecs on 3rd August and to 20,700 cusecs, the maximum during the year, on 10th August. The Jamrao and the other canals fed by the channel had therefore a very unsatisfactory supply in the kharif season and the area of cultivation on them was much less than the normal. The channel was slightly silted up in the rabi season when the river fell and at the end of November it was feared that the supply would be deficient and that the rabi crops would suffer; but the river suddenly rose 3 feet on 27th December and the supply was sufficient to bring the rabi crops to maturity.

61. The Head Regulator was kept fully open throughout the inundation and the maximum gauge reading at the regulator during the year was 24·4 feet upstream and 23·7 feet downstream on 10th August 1921, when Bukkur gauge read 16·8. The maximum gauge reading at 12th Mile of the channel was 27·6 feet on 22nd August 1921.

62. The pitching at the nose of the pucca left bank which had been disturbed during the abkalani was renewed in the cold weather and parts of the banks in the first 12 miles which had been badly scoured were pitched with stone and protected by stone groynes at a total cost of Rs. 5,560.

63. In March 1922 a cut was made at mile 25 to remove a bend and to keep the channel away from a sand hill which is heavily eroded and has been causing heavy deposits of silt.

64. The length of the Nara from the end of the Nara Supply channel to the Jamrao Head Works is about 96 miles and from the Jamrao to the Thar Weir about 100 miles. It commands over 500,000 acres of cultivable land. The area cultivated during the year on the Nara in the Eastern Nara District was about 52,500 acres against 50,407 acres in 1920-1921 and 47,633 acres, the average of the previous three years. The Nara.

65. The Nara below Makhi is being gradually improved. The raising and strengthening of the inner bunds from Makhi to Bakar which was completed during the last cold season will allow a higher level to be admitted below Makhi with comparative safety and thus improve the supply to Khipro, Thar and Hiral Canals. Last year on account of the erosion of the Nara just above Bakar, groyning was carried out and has proved very successful, as have groynes constructed further down. The construction of the inner bunds and the groynes at Bakar will enable silt from above to find its way lower down to fill up depressions in the bed. The Makhi Dhand forms a reservoir for the storage of water for rabi cultivation on the Mithrao. The Mooral and Baghdad Sang sluices which feed this Dhand were opened on the 2nd August and closed on 13th September 1921, but the level of water in it was not high enough to be of any use to the Mithrao.

66. The capital expenditure on this canal during the year amounted to Rs. 25,045, incurred mainly on (1) Constructing Office Building for the Executive Engineer, Southern District Jamrao Canal, (2) Converting 17th Mile West Branch Road Bridge into a Regulator, (3) Extension of Potho Minor, (4) Construction of a Distributary Ex 109th Mile Jamrao Canal and (5) Improvements to Jamrao Canal Head Works. This year the undersluices were kept tightly closed from the middle of July onwards and though the Approach Channel could not be scoured out when two attempts were made to do so in September, the amount of silt that entered the Jamrao at the end of the season was much less than in each of the previous two seasons. Jamrao Canal.

67. It was hoped that by keeping the shutters on the weir raised throughout the kharif season, there would be sufficient afflux always available at the weir to enable the Approach Channel to be thoroughly scoured by opening the undersluices and closing the Head Regulator of the Jamrao. This, however, did not prove to be the case and the scheme for providing a simple form of regulator on the weir by which it is expected to create the necessary afflux was sanctioned during the year.

68. The maximum and minimum discharges measured above the weir were 12,011 cusecs on 2nd September 1921 and 108 cusecs on 1st April 1921 respectively.

69. The area cultivated during the year was about 189,800 acres as compared with 174,629 acres last year and 223,587 acres, the average of the previous three years. The area under cotton was nearly 60,000 as compared with 108,072 acres in the last year and 111,805 acres, the average of the previous triennium, as the river was late in rising during the kharif season and fell early in the month of October. Good and timely rainfall resulted in a large extension of the area under Bajri crops. From the beginning of November the river began to fall rapidly and as the discharge of the Nara fell to the very low figure of 468 cusecs by the middle of December, Zamindars were discouraged from doing much rabi cultivation. By strict rotations, however, the rabi cultivation was brought to maturity. Cotton crop gave a satisfactory yield and the long felt deficiency of fodder disappeared. Owing to the closure of the Nara for clearance in March and to the short supply available in April there was little or no adhava cultivation. The kharif area was less than last year, but the area under Bajri showed an increase over the previous year's figures. Rabi area was 59,782 acres against 10,474 acres last year and 59,847 acres, the average of the last three years. An allotment of new land to the extent of 13,952 acres was made during the year on this canal.

70. This is a perennial canal taking off the Nara above the Makhi Regulator. Mithrao Canal.

71. Owing to the completion of the Makhi Distributaries the water supply of lands in the Nara Sub-division is no longer drawn from the main canal. With 11 feet below Bakhoro the full supply level of 9·5 feet at Kanahar is obtained.

72. The water supply in the beginning of the season was extremely poor, the discharges being 227 cusecs on 19th June and 606 cusecs on 10th July, and rotations had to be resorted to which kept alive seedlings till the position was saved by rains and a rise in the river.

73. Makhi Left and Chotiari Minor worked fairly well this year and Makhi Right worked better than in previous year owing to improvements by means of groyne work at the head; further raising of berms and groyne work was done in the last cold weather.

74. Due to heavy rains the water from the east entered the Makhi Right Distributary and has damaged the tail portion and washed away the banks in some places. In

order to avoid the expenditure of clearing and maintaining the portion of the Distributary for the sake of one tail karia, the karia has been allowed a permanent mouth from the main canal getting water with the 9th mile rotation.

75. The full supply at 30th mile could only be maintained on rotation days and before the rainfall deficiency was felt on branches and distributaries and karias taking off from the main canal.

76. The capital expenditure on this canal during the year amounted to Rs. 5,956 on Makhi Right and Left Distributaries *plus* Rs. 91,094 spent on remodelling Right and Left Bank Branches Ex 9th Mile Mithrao Canal.

77. The area cultivated during the year under report was approximately 75,500 acres as compared with 90,200 acres in 1920-192Land 101,567 acres, the average of last triennium.

78. This canal was opened on 18th May 1921 and worked well, water being properly distributed by rotations throughout the season. The Hiral Head Distributary did not work satisfactorily during the year under report. It got practically no water in June and July, but in August and September when the river was high it got a fair supply to mature the crops sown on rain water. In order to ensure designed discharge to the Distributary it is proposed to lower the pavements of the masonry work and the bed of the Distributary. Other minor improvements are also under consideration.

79. The cultivation during the year was about 11,900 acres against 13,700 acres in the last year and 14,385 acres, the average of the last three years.

80. The capital expenditure of the year amounted to Rs. 1,623 only and was incurred on constructing Head Distributary Hiral.

81. 584 acres were allotted on this canal during the year under report.

82. This canal was opened on 8th May 1921. Owing to low supply rotations had to be resorted to on the main canal upto the end of July and water was properly distributed on all branches and distributaries throughout the whole season.

83. The approximate cultivation during the year was 39,200 acres against 43,536 acres during the last year and 49,695 acres, the average of the past triennium.

84. The 3rd Mile Right and 7th Mile Left Bank Distributaries constructed during 1919-1920 did not work properly this year owing to the excessive draw off by karias in the upper reaches which resulted in deficiency at the tail where the karias were given mouths direct from the main canal. The adjustment of sluices is very necessary and will be carried out next cold weather.

85. The Khipro Canal was flowing from 24th July to 10th October 1921.

86. The clearance done last year and during the year under report proved beneficial. Double groynes were also constructed in the bed and side of the Nara ½ mile above and ½ mile below the present mouth of Khipro Canal with a view to improve the supply to the canal.

87. The cultivation during the year was 2,700 acres against 2,200 acres last year and 2,388, the average of the previous triennium.

(b) Canals taking off direct from the Indus.

88. The canal was opened on 29th May 1921. It received full supply for 10 days only and was closed on 10th October 1921. Throughout the season practically all the intermediate regulators had to be rotated. The early part of the season was decidedly bad for the main canal and branches and in consequence the cotton tracts of the Nasrat Sub-division suffered considerably. The canal has not been working well for some time and the clearance of tails of branch canals and part of the main canal will give temporary relief to the zamindars at the tail. The waterway of many karias which are drawing excessive supply will also have to be reduced.

89. The work of excavating a new head to Madad and Lundo was completed during the year and it is hoped that the canals will get a very good supply.

90. The cultivation during the year on this canal was 70,941 acres against 78,292 acres in the last year and 73,714 acres, the average cultivation of the previous three years.

91. The total expenditure on the construction of karias and kasis upto the end of the year on the canal amounted to Rs. 2,88,722.

92. An allotment of 1,428 acres was made on this canal during the year under report.

93. The canal was opened on the 29th of May 1921. It received full supply level for 32 days and was closed on the 1st of November. During June and July when the river was low rotations had to be resorted to.

94. During the year most of the karias that were drawing an excess supply had sluices constructed over them with the result that water reached to the tails of Subrab, Nar and Yaro Canals where deficiency was always felt in past years. The construction of a regulator at 56th mile of the main canal was also started during the year which when completed will increase the supply of water in Mubarakwah. Two more regulators, one at 65th and the other at 72nd mile of the canal, are necessary to stop breaches at the tail. The tract round about Daulatpur in Moro Taluka was under flood water as usual. The left bank of Suhagan which was raised to about 2½ feet above H. F. L. was again over-topped and water crossed Suhagan and Herbertwah breached banks and touched the right bank of the Baderwah. The work of strengthening and raising the right bank of Suhagan was therefore carried out.

95. The cultivation during the year on this canal was about 96,500 acres against 106,494 acres in the last year and 98,669 acres, the average of the previous three years.

96. A sum of Rs. 4,890 was spent during the year on the construction of a regulator at the 56th Mile. The total approximate expenditure on the construction of karias and kasis to the end of the year under report amounted to Rs. 1,32,000.

97. New land to the extent of 975 acres was allotted during the year.

98. The Ren Distributary which takes off from the Dad did not get sufficient water during June and July on account of rotations on the Dad canal. There were some complaints of deficiency of water which were partially removed by resorting to rotation at the triple regulator over Ren Distributary mile 6/4. There was good rainfall by the middle of July which helped the crops to a great extent.

99. The canal worked well during the year and the repairs to the banks below Alipur Regulator made it possible to increase the down stream gauge to 17·3 feet against 16·7 feet of last year. In spite of this increase the full supply reading of 8 feet was not attained at the Triple Sluice for some time, as the draw off by certain branches to which improvements were carried out was greater than before and the bed of the Fuleli had silted to some extent owing to the Escape being kept closed throughout the rabi season, which was necessary to meet the legitimate demands of the rabi canals in the cold weather when the river was very low. In August full supply level was attained everywhere and the Escape was opened from 1st to 5th, 12th to 14th and on 16th.

100. The old Fuleli worked very well inspite of the low river in the beginning of the season and flowed for 130 against 119 days last year.

101. Rotations at Alipur Regulator were carried out to save crops in Guni and Dero Mahbat Sub-divisions and were very successful.

102. The area cultivated during the year was nearly 380,000 acres against 385,382 acres in the last year and 382,475 acres, the average of the previous three years.

103. The capital expenditure on this canal during the year under report amounted to Rs. 1,29,052 and was incurred mainly on constructing the new head regulator on the Fuleli at Jamshoro.

104. This canal worked well and the lower reaches benefited considerably from the construction of pucca sluices in the upper reaches with a view to improving the supply and reducing silting in the tail branches of this canal. A bad bend was removed from taki 801 to taki 877 which reduces the length of the canal by about 1½ miles, with very satisfactory results. A second bad bend from taki 632 to taki 705 is also being removed with the same object.

105. The construction and reduction of sluices taking off direct from Hasanali which was taken in hand last year was completed during the year under report at a cost of Rs. 1,220. The work of constructing a sluice on karia Sama Ex Hasanali was commenced during the year and Rs. 313 spent on it.

106. The approximate area cultivated during the year was 30,000 acres against 17,178 acres cultivated in the last year and 18,046 acres, the average of the previous three years.

107. All the canals in this District worked satisfactorily on the whole although there was deficiency of water in Alibahar in the beginning of the season. The mouth of the Sarfraz Canal which was groyned during the working season worked well. The work of constructing a Head Regulator over Alibahar which was in progress during the last year was completed during the year under report at a total cost of Rs. 59,491, the expenditure during the year being Rs. 21,165.

108. The cultivation in the whole of the Hyderabad Canals District for the year was about 254,300 acres against 258,097 acres in the last year and 254,334 acres, the average of the past three years.

(II) WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT.

109. The principal canals under this head are Naulakhi, Mehrab and Dambhro in the Nasrat Canals District and Ren, Gharo Mahmudo, Kari Shumali and Nasir in the Hyderabad Canals District. The Mehrabwah worked most unsatisfactorily. The supply in Naulakhi and Dambhro was deficient in the beginning of the season owing to low river but improved later on. The other canals worked fairly well.

4.—PROTECTIVE EMBANKMENTS.

110. The maximum gauge reading on Bukkur was 16·8 feet on the 10th August 1921, compared with 15·0 feet during 1920. The water touched the whole line of the Kashmor Bund including the 1896 and Gouspur loops. Five cuts were made in the front bund (1896 loop) for soaking the Gouspur loop which was trenched last year in order to prepare it as the first line of defence in case the 1896 loop was eroded away. The maximum depth of water impounded in the compartment between the Gouspur loop and the right bank Begari bund was 10·3 feet.

111. Owing to a heavy gale causing heavy wave wash considerable damage was done to the new right bank Begari bund. The bund breached in five places almost simultaneously through leaks and the flood water entered the Begari Canal, where it was held up by the Head Regulators of the main canal and the Choi branch and the old left bank bund of the Begari. The latter withstood the water for about three days but eventually breached through an under ground leak and considerably relieved the pressure on the new head regulator and the Gouspur loop. The Head Regulator was very severely tested.

112. The erosion of the river which was very active during the last year opposite miles 4/5 to 5/3 of the 1896 loop gradually changed towards mile 4, as a result of which active erosion ceased at the point where it was anticipated the bund would be eroded. The 1896 loop is thus so far safe as the least distance from the pucca edge of the river to the toe of the old 1896 loop is now 700 feet. The danger has not, however, disappeared as the river is still on the right bank, the set being now at mile 3/3 to 3/4.

113. All the bunds in the Shikarpur Canals District withstood the floods that came against them. Excepting a leak in mile 4/2 of the Flood Diversion Bund which developed into a breach, all others were promptly detected and closed. The breach water flooded and submerged the village of Mando Dairo. To reduce the depth of water in the village two artificial cuts were however made in the cross bund connecting the Kasimpur bund—an abandoned river embankment—and the water rushed through these cuts and relieved the pressure. The breach caused no damage; on the contrary there will be much rabi cultivation, and the breach water a god send, as the land in this portion had had no water for the past seven years.

114. Owing to the high level of the river, there was heavy pressure of water against the bunds in the Ghar Canals District. The danger through one of the sluices in mile 15/1 of the Saidabad Bund having its downstream pitching washed away, was averted only by prompt action.

115. The length of the river bunds in the Western Nara District is 101 miles. The sudden rise of the river caused a serious breach in mile 2/2 of the Abad Bund which was eventually closed. The bund in this length is mainly composed of very bad kalrish soil and rests on treacherous ground. Strenuous efforts were made to prevent the breach water joining the Western Nara and to divert it along the line of least damage to the extensive and fertile rice tract of the country on the right bank of the Nara in the Talukas of Labdaria, Larkana, Warah and Mehar and also to prevent the important towns of Dokri, Badeh, Nasirabad and scores of other villages being flooded. By breaching the Loung bund and banks of the new Feeder to the Western Nara at several places and giving a new cut to the bund in mile 17/6 some of the breach water drained back to the river. Efforts were also made to lead the breach water from Pateji tail across the Young wah to Vheji Dhand with a view to cause the minimum damage to the kharif crops and villages in the Mehar and Kakar Talukas. The damage to the kharif crops will be more than compensated by extensive rabi cultivation.

116. To prevent future mishaps plans and estimates for raising and strengthening the bund have been sanctioned and the work will be completed before the inundation of 1922.

117. All the bunds in the Karachi Canals District stood well though they had to bear a severe strain both owing to the high level of the river and to wavewash. The new Thahimani Gulel loop was tested. There were several underground leaks which were successfully closed.

118. Erosion is active near several parts of the bunds but so far they are at a safe distance from the river.

119. The total mileage of bunds in the Nasrat Canals District is 15 miles and all stood water pressure well.

120. The flood water touched the Ren Bund in August 1921 and wetting was done by the beldar establishment. The work of raising and strengthening this Bund was carried out during the year under report and an expenditure of Rs. 2,768 incurred on it.

121. The new loop behind the Ghallian Bund was completed and wetted during the inundation. The heavy erosion in front of the Ghallian Bund has stopped. The Jamshora front bund was raised to Indus River Specification level and section and the pitching was repaired and reset where it had been damaged by the heavy wave wash to which it is exposed.

122. The Hajipur Bund was repaired and raised in places and is now nearly up to Indus River Commission section.

123. Rain in August 1921 did a good deal of damage to the front and back slopes of the bund and wave wash did great damage in three places where there are no trees or jungle on the foreshore to break the force of the wind and waves. In the fourth mile these waves are very heavy and as there is no stone pitching there diagonal groynes have been constructed to break their force. Endeavours are also being made to encourage the growth of lai jungle on the very narrow foreshore in this reach.

5.—INDUS RIVER COMMISSION.

Indus River Commission—Works and their classification.

124. The expenditure on works and surveys was charged to "15-Other Revenue Expenditure financed from ordinary Revenues—Works for which neither Capital nor Revenue Accounts are kept".

Surveys of the Indus.

125. The total length of the survey traverses done during the year was 938 miles showing a decrease of 235 miles as compared with the previous year's record. This decrease was due to enconomy in method. The Indus from about 16 miles above Kashmor to its bifurcation at the delta (522 miles), the Haidri river (24½ miles) and the Ochito (5½ miles) were surveyed and plotted.

Nara river.

126. Survey of the Nara river from its mouth to a point 40 miles below was also carried out during the year.

Demarcating District boundaries.

127. The work of demarcating District boundaries was also in progress from Kashmor to Sukkur and then again from Naulakhi to Sita, a total river length of 110 miles, the intermediate portion between Sukkur and Naulakhi having been demarcated already by the Khairpur Boundary Commission.

Indus River Gauging District.

128. A new District called the Indus River Gauging District was formed in September 1921 for the purpose of recording and collecting accurate data regarding the discharges of the river and the withdrawals therefrom, with a view to a correct distribution of the water supplies between Sind and the Punjab. The control of River discharge observations already being conducted by the Indus River Commission was transferred to this new District.

River Gauges.

129. Gauge readings of the river were taken daily at 11 stations, twice a week at 4 stations and weekly at 6 stations.

130. The maintenance of all these gauges is necessary for the purpose of fixing the high flood levels for the river embankments, for recording the changes in level of supply at canal mouths and for observing any permanent changes in the level of the river.

Scientific Works and discharges of the Indus.

131. Discharge and other special observations were continued at Sukkur and Kotri as usual. The results will be published in the Indus River Commission Records. The total monthly discharge at Sukkur during the inundation season and the minimum, maximum and average discharges of the year, compared with the results of the previous four years, are as follows :—

Month.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
	Cusecs.	Cusecs.	Cusecs.	Cusecs.	Cusecs.
June	7,238,000	13,257,600	3,350,000	5,452,000	5,377,740
July	8,603,000	9,809,600	12,136,000	15,422,000	9,297,597
August	13,941,000	9,924,000	14,032,000	14,606,000	14,623,021
September	12,985,000	5,924,000	7,488,000	4,726,000	7,763,473
Total ...	47,767,000	38,914,000	42,106,000	41,178,000	37,061,861
Average discharge ... Cusecs.	391,492	318,967	345,131	337,486	303,777
Maximum discharge ... Cusecs.	740,279	521,890	506,352	626,406	605,278
Minimum discharge June to September ... Cusecs.	126,049	92,901	135,136	102,600	96,869
Minimum discharge observed throughout the year... Cusecs.	28,063	21,724	31,017	22,532	26,078

Extensions and Improvements and special repairs.

132. The estimated cost of works under these heads sanctioned or approved during 1921-1922 by the Indus River Commission for execution by the Executive Engineers and by the Commission was as follows :—

District.	Extensions and Improvements.	Special repairs.	Total.
A—Indus Right Bank Division.	Rs.	Rs.	Rs.
Begari Canals	2,315	.....	2,315
Shikarpur „	.....	2,81,481	2,81,481
Ghar „	.....	6,883	6,883
Western Nara	168	11,657	11,825
Karachi Canals	1,13,948	1,26,953	2,40,901
Total ...	1,16,421	4,26,974	5,43,405
B—Indus Left Bank Division.			
Nasrat Canals	12,700	.....	12,700
Hyderabad „	.....	.....	.....
Fuleli „	6,934	.....	6,934
Total ...	19,634	.....	19,634
C—Indus River Commission.			
Works under the direct control of the Indus River Commission	14,191	.....	14,191
Grand Total ...	1,50,256	4,26,974	5,77,230

Total expenditure.

133. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	39,611*
Repairs	25,823
Establishment	1,43,038
Tools and Plant	30,429
	2,38,901

* Includes Rs. 14,307 spent on demarcation of boundaries between districts on the river side in Sind, which was charged to "41" Civil Works Provincial.

Erosion.

134. In Begari Canals District, there was heavy erosion in front of the 1896 loop to Kashmor Bund miles 3/2 to 6/1. The maximum rate of erosion was 122·5 feet per week opposite mile 3/6, the length remaining uneroded at mile 5/0 on 17th September 1921 was 700 feet only. The Gouspur loop of 1911 forms a retired loop behind this point of attack.

135. In Shikarpur Canals District there was heavy erosion opposite mile 16/5 to 17/4 of Sukkur Begari Bund, the maximum rate of erosion being 220 feet per week at mile 17/2, where there is no retired loop. The distance between the river and the bund which remained uneroded on 10th December 1921 was 1,747 feet. Erosion continues in this section, but a retired loop has been constructed.

136. In Western Nara District there was some erosion opposite the Western Nara Bund mile 100/2 to Chariowah. The maximum rate of erosion was 98 feet at mile 100/3 and the length remaining uneroded at mile 100/6 was 1,215 feet on 25th March 1922. If the erosion continues to be active in this section the river will reach the rocky hills near Sehwan.

137. In the Karachi Canals District erosion continued to be very active opposite the Thahimani Gulel loop. The river reached the toe of the Marho Emergency loop on 31st December 1921, when the distance between the river and the Thahimani Gulel loop was only 1,466 feet. Erosion is still active and the construction of a retired loop behind the existing Thahimani Gulel loop, the estimate for which has been sanctioned, is under consideration.

Sukkur Barrage Project.

138. The Sukkur Barrage Canals Project was submitted by the Government of India to the Secretary of State in December 1920. The final orders of the Secretary of State to start work are awaited.

139. The Sukkur Barrage Division was formed on 1st February 1921. It is working up all details necessary for preliminary work in connection with the Barrage Canals. The chief work being carried out is the close contouring of the whole tract commanded by the projected Barrage Canals. Up to the close of the year under report 5½ months field work in connection with the contouring was done representing

the taking of levels at close intervals over an area of about 2,300 square miles, involving over 9,200 lineal miles of levels. Whilst this work has been in progress the zeros of all existing canal and bund gauges met with have been checked and their true reduced levels will be worked out in due course.

140. Observations for water levels, and cross sections of the Indus at the site proposed for the Barrage were continued throughout the year under report as also observations of the Nara Supply Channel.

6.—MISCELLANEOUS.

Surveys, etc.

141. *Bench Marks.*—In the Ghar Canals District the Survey Department carried out the following levelling operations :—

(1) Along Railway line from Ruk to Sehwan.

(2) Along the road—

(*a*) Shikarpur to Kambar.

(*b*) Waraso *via* Shahdadkot to Ratodero.

(*c*) Madad Chandio to Mehar.

The following bench marks have been constructed :—

(1) Bench mark at Dostali.

(2) Bench mark at crossing of Shikarpur Khairo Garhi road with Kur Khairo.

(3) Bench mark at Chuto Bhuto.

(4) Rail bench mark No. 214 in survey No. 78 of deh Muradali.

(5) Bench mark on the bridge at mile 70 of Napat Sukkur.

(6) Bench mark on crossing of Kur Shah near village Karia Gurgej.

(7) Bench mark at Shahdadkot on the plinth of the District Bungalow.

(8) Bench mark in place of rail bench mark No. 220 opposite to 4th mile of road from Shahdadkot to Ratodero.

(9) Rail bench mark No. 111 3½ miles from village Sijawal towards Shahdadkot and 1/4 mile on south of road.

(10) Bench mark at Arzi Bhuto in the Public Works Inspection Bungalow.

(11) Bench mark at Mir Mahomed Khan Jalbani on the west of old G. T. S. Tower.

(12) Bench mark at Ratodero in the Public Works Subordinates' Inspection Landhi.

(13) Rail bench mark No. 206 opposite mile 3/4 of Shahdadkot Bagodero road.

(14) Bench mark near Saudo Mahomed village.

(15) Rail bench mark No. 197 opposite mile 7 of Shahdadkot Bagodero road and half a mile away from the same road.

(16) Rail bench mark No. 87 at Sagan 7 furlongs to the west of Chosul Ratodero road and 1½ furlongs to the north-east corner of village Supra, Taluka Ratodero.

(17) Bench mark near village Rahuja on the west side of the road from Kambar to Ratodero.

(18) Bench mark cut on upstream string course of bridge across Hirawah on road from Kambar to Ratodero.

(19) Bench mark cut on upstream string course of bridge across Chattowah on road from Kambar to Ratodero.

(20) Bench mark at crossing of Kur Dato on central point of cornice of bridge at mile 2/6, 35 feet on upstream side of Kur Dato.

(21) Bench mark at crossing of Nurwah on the centre of upstream parapet of the bridge at mile 1/1 of Nurwah.

(22) Bench mark on the north-west corner of District Bungalow compound at Kambar.

(23) Rail No. 70 double headed 6 feet long embedded in concrete block projecting about 6" above ground level 273 feet from bridge along Karia Sono Ghangro.

(24) Bench mark at Gaji fixed in the plinth of Seth Aishimal's building on west side.

(25) Bench mark near Mirwah No. 2 road bridge in mile 12/6, 118 feet south-east from road bridge.

(26) Bench mark at Warah on the plinth of right wing of the Kardarate at Warah.

(27) Bench mark about 120 feet north-west of crossing of Nasirwah and road from Dostali to Warah.

(28) Bench mark on the east of the road from Hamal to Dostali between Karia Lakha and Karia Phital also ex Kur Rato.

(29) Bench mark in village of Lashkrikhan Gatbani near Lundo Napat.

142. Nothing has been done towards precise levelling and topographical work by the Survey Department in the Indus Right Bank Division. The levelling operations along the Eastern Nara Channel from its head at Rohri to Jamrao Weir were taken up by the Survey Department during March 1922. The line from Khorewah to Hyderabad 49 miles in length in the Fuleli Canals District was levelled by the Survey Department during the year under report.

Plantations.

143. Existing plantations on canals and bunds in the Left Bank Division were well cared for. New trees were also planted in some Districts and are thriving.

Irrigation of Cotton.

144. No Egyptian cotton was sown in this Division during the year. The following table shows some details regarding waterings given to indigenous cotton :—

District.	Lift lands.		Flow lands.		Date of last watering.
	Number of waterings.	Intervals between.	Number of waterings.	Intervals between.	
Hyderabad Canals District ...	5 to 7 ...	.....	.....	.....	1st October 1921.
Fuleli Canals District ...	5 to 7 ...	10 to 20 days.	.....	.....	25th September 1921.
Eastern Nara District ...	.....	... ..	5 to 6 ...	Beginning of June to 15th October 192 .	15th October 1921.
Northern District Jamrao Canal.	7 to 12 ...	.....	6 to 12 ...	.....	Lift between 5th November 1921 to 12th November 1921 and flow between 15th October 1921 to 7th January 1922.
Southern District Jamrao Canal.	5 to 10 ...	.....	5 to 8 ...	.....	22nd October 1921 to 12th November 1921 — lift.
					17th September 1921 to 26th November 1921 — flow.

III—DECCAN AND GUJARAT.

1.—NORTHERN DIVISION.

General Remarks.

145. The rainfall in the year under review was greatly in excess of the average of past years. It was, however, rather late and transplantation was thereby delayed to a certain extent. It continued to the end of September and all the tanks were filled. Consequently it was possible to supply the demands of the cultivators who required one or two end waterings for maturing their crops. There was no complaint as regards deficiency from the Kalam bandhi villagers as they received plentiful supply throughout the season.

(i) Works for which Capital accounts are kept.

Hathmati and Khari Cut Canals.

146. The rainfall gauged at Ahmedabad and Prantij during 1921-22 was 42·51 and 43·42 inches against an average of 30·17 and 32·07 inches respectively for the last 30 years including the year under report. The monsoon, though somewhat late, commenced by the middle of July, and was very favourable for agricultural purposes and lasted till the end of September. There were floods in the Hathmati river on 28th July, 9th September and 20th September. On these dates, the water level rose to 2·8, 2 and 2·5 feet, respectively, above the Hathmati weir crest, the rainfall at Himatnagar being 2·17, 3·12 and 1·55 inches measured on the previous days. No damage occurred to the canal or the headworks as the floods were only of moderate intensity. The Hathmati Canal was opened on the 20th July and the surplus water stored up in the Bokh Reservoir. The maximum discharge of the canal was 323 cusecs on the 2nd October 1921 and the minimum discharge 25 cusecs on the 18th March 1922. In the month of March, the discharge varied between 25 and 50 cusecs. After that, there was little flow and the canal was accordingly run intermittently after heading up water at the weir for a few days. The Bokh Reservoir was filled to its F.S.L. by means of the Bokh feeder, the capacity at that level being 300 million cubic feet, which was available for irrigation on the Khari Cut Canal.

147. The Chandola Tank, which is fed by the Khari Cut Canal taking off from the weir at Raipur on the Khari river, was filled twice up to R. L. 139·50 in August and again in September to R. L. 140·20, the F. S. L. being at R. L. 142·00, and the water was utilized fully for irrigating kharif and rabi crops. The area irrigated on the Hathmati Canal during the kharif season was 515 acres of which 15 acres were watered in the hot weather. In the rabi season, 3,281 acres were irrigated.

148. On the Khari Cut Canal there was a great demand for canal water at the close of the season. The Kharif crop was reaped only at the end of November and this late harvest gave less yield than would have been the case, if transplantation had been done

at the normal time. In some of the low valley lands the crop did not mature fully, as water could not be drained off early enough. The area irrigated on the canal during the Kharif and rabi seasons was 11,415 and 1,470 acres respectively.

149. The total area irrigated and the gross assessed revenue on the Hathmati and Khari Cut Canals during the year were about 16,700 acres and Rs. 1,00,400 respectively, against 11,000 acres and Rs. 43,000 the average for the previous triennium.

150. The area irrigated and the gross assessment on the Wangroli, Tranza-Nagrama, Savli and Saiat Tanks, compare with the averages for the previous triennium as shown below :— Tanks in the Kaira Collectorate.

Name of Tank.	1921-1922.		Average of the previous three years.	
	Area irrigated.	Gross Assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Wangroli	1,733	6,398	1,148	4,761
Tranza-Nagrama	78	2,414	.....	568
Savli	2,668	9,058	1,011	3,383
Saiat	409	1,620	279	1,607

151. The Wangroli, Savli, Saiat tanks filled completely, while the Tranza-Nagrama Tank filled partly. The water from these tanks was utilised in irrigating kharif and rabi crops, mainly rice, wheat and gram. There was no irrigation in the hot weather from these tanks during the year under report. All these tanks were maintained in good condition at a cost of about Rs. 17,300.

152. The Futelao Tank at Nani Kharaj in the Dohad Taluka overflowed and its waste weir worked with 2 feet depth of water, with no danger to the tank bund. There was no demand for water in the kharif season and only two acres were irrigated, while in the rabi season, 59 acres were irrigated. The miscellaneous receipts including tank bed cultivation were Rs. 56. The tank was maintained in good order at a cost of Rs. 1,398. Futelao Tank.

(ii) Works for which only Revenue Accounts are kept and agricultural works.

153. The rainfall at the source of the Khari river was good throughout, and two ordinary floods occurred in the Khari river at Raipur on 30th July and 20th September. Owing to this, the water was allowed to run uninterruptedly throughout the monsoon months, *i.e.*, upto 17th November. When the flow diminished to 15 cusecs, the water was diverted into the Khari Cut. The supply proved quite sufficient for the rice crop in the Kalambandi villages though the transplantation was late. A reservoir is under construction at Naika to serve as a storage in this system. Khari Sluices.

154. The rainfall gauged at Dohad was 37·94 inches. The tank was full and the waste weir worked with a depth of 4 feet. The heavy flood caused erosion at the end of the masonry waste weir and the open ground waste weir was eroded in a length of 50 feet. When the waste weir ceased to work, arrangements were made to hold up water at F. S. L. by throwing up a small bund in the breached portion. Plans and estimates for constructing a clear overfall waste weir in the breached portion have since been sanctioned and the work is nearly completed. The rainfall being seasonable, there was no demand for water for kharif crops, of which only 27 acres were irrigated including 3 acres of hot weather crops. In the rabi season, 674 acres were irrigated and this gave great relief to cultivators, as their maize crop had failed on account of excessive rain. The total area irrigated during the year was 701 acres against 558, average of the last the last three years, while the gross assessment of the year amounted to Rs. 1,642 which is also the average of the last three years. The tank and the canals were maintained in good condition at a cost of Rs 3,286. Mowalia Tank.

155. Improvements to 18 tanks in the Gujarat Irrigation District, and repairs to 61 tanks in the Gujarat Irrigation and 5 tanks in the Surat and Broach Districts were executed at a total cost of Rs. 21,622 and Rs. 29,846 respectively. Old Tanks.

156. Most of the small tanks and bunds in the Ahmedabad, Kaira and Panch Mahals Collectorates were full during the year on account of good rainfall, and the storage was utilized mainly for rice crop. Due to heavy rainfall, there were breaches caused in some of the tanks in the Surat and Broach, and Gujarat Irrigation Districts, and steps were taken to close them.

157. The drainage channels in the Surat and Broach and Gujarat Irrigation Districts were maintained at a cost of Rs. 6,565 and Rs. 11,440 respectively. There was good flow in all of them during the year under report. The Diversion channel from the Eastern Drainage to the Western Drainage channel at Dholka, which was practically completed, came into operation this year and proved its utility in diverting the flow into the Malao Tank which filled after many years. Drainage channels.

158. The protective bunds at Wagrej and Bigri in the Bulsar Taluka of the Surat District, and those at Lakhigam, Kadodra, and Harinagar in the Wagra Taluka of Protective Bunds and Reclamation Works.

the Broach District, which were constructed in the past with the object of preventing tidal water damaging culturable areas, continued to give the good results expected. The Reclamation Bunds near Hansot and Asarsa in the Broach District gradually assist in reclaiming a large area of salt land by siltation. The work of constructing the Protective Bund at Gandhar in the Wagra Taluka of the Broach District was finally completed at a total cost of Rs. 14,246 against the estimated amount of Rs. 14,997. The total cost of maintenance and repairs of the Protective and Reclamation Works in the Surat and Broach District during the year amounted to Rs. 7,889.

2.—CENTRAL DIVISION.

(i) *Works for which Capital accounts are kept.*

Ekruk Tank.

159. During the year an area of 5,640 acres was irrigated under this tank as against 5,058 acres the average of the previous three years and the gross assessed revenue amounted to Rs. 1,96,762 showing an increase of Rs. 56,510 over the average of the past three years. 50 acres of sugarcane were allowed to be grown in connection with the new experimental methods of planting it under the supervision of the Agricultural Department. 12 acres and 26 gunthas of fodder were also allowed to be grown by the Famine Relief Committee for cattle kitchen from the perennial canal of the Ekruk Tank.

160. The question of raising the Ekruk Tank Dam so as to have a free board of at least 7 feet above H. F. L. in accordance with the run off in September 1872 is now under consideration.

Jamda Canals.

161. The eight months' rabi leases for the six years' period, which were introduced as an experiment on the Jamda Canals in October 1916, terminated on 14th June 1922. The total area secured under the leases during this period was 717 acres only, against the minimum estimated area of 1,000 acres. Judged by the figures of leased acres secured during each year, the system does not seem to have possessed sufficient attraction for the cultivators who entered into leases only in years of drought. However it is obvious that the cultivators have seen the benefits of the lease system from the advantages derived in years of drought, such as priority of claim and security in the matter of getting canal water whenever needed and that too without having to wait for permits, as is necessary in the case of ordinary applications for water, but the scheme will not be a success in the absence of an independent reservoir for the canals, which alone will be a guarntee of sufficient water being available when the natural flow in the river at the bandhara falls short of requirements. Unless there is a reservoir to supplement the water of the Girna river at the Jamda bandhara, the lease system will not, it is feared, be popular of successful.

162. The total area irrigated by these canals during the year was about 1,600 acres and the gross assessed revenue amounted to Rs. 8,295. The corresponding figures of the average of the previous triennium were 4,415 acres and Rs. 15,179.

Krishna Canal Khodshi weir.

163. This canal takes off from the left bank of the Krishna river from a masonry weir at Khodshi near Karad in the Satara District. The capacity of the storage has been found insufficient to supplement the discharge of the river and adequately to irrigate the crops dependent on the canal in the hot weather. It has, therefore, been proposed to erect teak wood automatic (Roorkee pattern) falling shutters along the crest of the weir in order to head up an extra four feet of storage and to construct a continuous buttress wall on the downstream side of the weir to ensure its stability under the increased head. A revised project providing for the above items, amounting to Rs. 85, 226, has been sanctioned. Part of the work, *viz.*, providing a continuous buttress wall has already been carried out in the year 1914. The remaining work has been deferred owing to financial difficulties and further investigation shows that it is unlikely to produce the benefit anticipated. No further progress will now be made with this work pending investigation of other proposals for providing additional hot weather storage supply.

164. The area irrigated on the canal was about 8,400 acres against an average of 7,400 acres and the gross assessed revenue was Rs. 54,200 which shows a decrease of about Rs. 4,600 from the average of the three previous years.

Other Works.

165. The remaining works are small and do not call for any special remarks. The area irrigated by these works was about 18,000 acres.

Total area and assessment.

166. The total area irrigated on these works was 33, 664 acres and the gross assessed revenue Rs. 3,72,816, the average of the previous triennium being 36,132 acres and Rs. 3,33,708 respectively. The decrease in area as compared with the last triennium was due to the particularly large fall in area under the Jamda Canals and the Ashti Tank owing to deficient storage of water. The net increase in gross assessment was mainly on account of the large increase in the Ekruk Tank due to large consumption of water for non-irrigational purposes by the Municipalities of Barsi and Sholapur and the Mills at Sholapur.

(ii) *Works for which only revenue accounts are kept.*

167. The total expenditure on extensions and improvements and maintenance and repairs to the Bandharas, etc., in the Satara, East and West Khandesh Districts was Rs. 12, 062 and the area irrigated thereon was 10,237 acres.

3.—Deccan Irrigation Division.

(i) *Works for which Capital Accounts are kept.*

(Works in operation.)

168. One of the oldest, and, so far, the largest irrigation work in the Deccan is the Nira Left Bank Canal, which was completed in 1898-1899 at a cost of about Rs. 66 lakhs. It is about 100 miles long and irrigates a large portion of the Poona District. It is fed by Lake Whiting, a reservoir constructed on the Yelvandi river at Bhatghar, some 32 miles south of Poona. The masonry dam is 127 feet high and about 3,000 feet long and the storage capacity of the lake is about 5,300 million cubic feet. A dam 190 feet high is being constructed just below the existing one in order to provide a combined supply to the Nira Left Bank Canal and the Nira Right Bank Canal which is under construction. The new dam will increase the storage capacity of the lake to about 24,000 million cubic feet. The additional supply will be utilized mostly by the new Nira Right Bank Canal. Nira Left Bank Canal and Shetphal Tank.

169. The Shetphal Tank is a comparatively small work constructed near the tail of the Nira Left Bank Canal from which it receives its supply during the monsoon for irrigating lands under its command.

170. During the year under report this system irrigated about 69,000 acres yielding a gross revenue of about Rs. 6,59,000 or a probable net revenue of about Rs. 4,82,000, which works out to about 7 per cent. on the capital invested, which is also the average of the preceding three years. The irrigated area and the net revenue also fairly agree with the respective averages.

171. A form of long term water leases that is peculiar to this irrigation system and is being extended to other canals is the so-called "perennial block". It consists of a six-year-agreement between the Irrigation department and the lessee, under which the former guarantees the supply of water for the irrigation of sugarcane on one-third of the area concerned and for other crops on the remaining area during the monsoon and rabi seasons and the lessee binds himself to pay a fixed sum per acre in that area, whether water is taken or not. There are at present about 16,000 acres under "perennial block" agreements on the Nira Canal.

172. Another form of long term agreement in vogue on this and other canals is the "eight months' lease", which mainly differs from the "perennial block" in that it concerns irrigation during the monsoon and rabi seasons only. Yet another modified form is adopted on some canals and applies solely to rabi irrigation.

173. The guarantee and, generally, the monopoly of water for the more valuable crops is the attraction of these various long term agreements and the advantage to the department is the stability of irrigation during the important seasons of rabi and hot weather, and also a fixed revenue that can be depended upon.

174. This irrigation tank, formed by means of an earthen dam on the Man river with a storage capacity of about 3,000 million cubic feet, lies on the eastern borders of the Satara District but irrigates lands in the Sholapur District. Though the capacity is considerable, the tank has a poor supply. Mhaswad Tank.

175. The area irrigated during the year was about 10,000 acres, the gross revenue over Rs. 73,000, and the probable net revenue about Rs. 54,000.

176. This is the first of the largest irrigation works of recent construction in the central Deccan for the protection of areas liable to famine. It was completed in 1915-1916, at a cost of a little over one crore of rupees. The system comprises, (i) a storage reservoir, called Lake Beale, on the Darna river, which is a tributary of the Godavari, (ii) a pick-up weir at Nandur Madhmeshwar on the latter river, and (iii) two canals, the Godavari Right and Left Bank Canals, taking off from this pick-up weir. Godavari Canals.

177. The Darna Dam, inclusive of the waste weir, is a little over a mile long and has a maximum height of 92 feet and a storage capacity of nearly 9,000 million cubic feet.

178. The Godavari Right Bank Canal, which is the more important of the two canals, is 69 miles long and serves the northern tracts of the Ahmednagar District. The Left Bank Canal is 48 miles long and irrigates lands in the south of the Nasik District and north of the Ahmednagar District.

179. The development of irrigation on these canals is proceeding fully up to expectations. Sugarcane cultivation is steadily advancing, the total area of the latter crop irrigated during the year being about 6,700 acres, showing a small increase over the preceding year's figure. The Gul industry was new to the locality, but the ingress of expert growers from Poona District, where sugarcane cultivation has been long in existence on the Nira Left Bank Canal and Mutha Canals, has made it possible to establish the industry on the Godavari Canals.

180. The area of all crops irrigated by the two Godavari Canals was about 41,000 acres, yielding a gross revenue of about Rs. 5,32,000 or a probable net revenue of about Rs. 3,33,000 which results in an approximate return of 3 per cent. on the capital cost. There was a decrease of 2,500 acres in the area irrigated compared with the average of the past three years, which is due to less area grown under rabi crops; on the other hand there was a slight increase in the revenue over the average, consequent on the extension of sugarcane cultivation; but the year compares unfavourably with the preceding one, both in respect of area irrigated and revenue, as a result of an unsatisfactory monsoon.

Mutha Canals and Matoba Tank.

181. This irrigation scheme was completed in 1896-1897, the capital cost being about 65 lakhs of rupees. There are two canals, the Right and Left Bank Mutha Canals, of which the former is 70 miles and the latter 18 miles long. Both the canals take off from Lake Fife, a storage reservoir of a capacity of about 4,000 million cubic feet formed by a masonry dam, about 3,400 feet long and 107 feet high, on the Mutha river at Khadakvasla, about 10 miles southwest of Poona.

182. The Mutha Canals play a very important part in the welfare of the city of Poona and the surrounding country; they furnish the cantonment and the city with their supply of water and have, besides irrigating ordinary crops, greatly promoted the cultivation of fruits, vegetables, fodder and sugarcane within easy reach of a large city and an important military centre. The cultivation includes about 1,700 acres under fruits and vegetables and about 2,000 acres under fodder crops. A small sugar factory is working at Phursangi.

183. This system irrigated about 16,000 acres during the year and earned a gross revenue of about 3 lakhs of rupees, inclusive of sales of water to the cantonment and the city; the probable net revenue will come to about 1¼ lakhs of rupees, giving an approximate return of 2½ per cent. on the capital invested, as compared with the average of about 3½ per cent. for the preceding three years. There was a decrease of about 4,000 acres in the area irrigated and a consequent fall in the revenue compared with the average of the past three years, due to the unsatisfactory character of the monsoon which resulted in a curtailment of rabi crops. The area of sugarcane which had outgrown the possibilities of assured irrigation has also been permanently reduced to reasonable limits (about 3,500 acres).

184. On the Mutha Right Bank Canal the growth of aquatic weeds is so prolific that the flow has to be stopped now and then in order to clear the obstruction. A special study of the weed question is being made and it is hoped to solve the problem satisfactorily and apply the results to other canals affected with weeds, *e g.*, the Godavari system.

185. The Matoba Tank, a small irrigation work, receives its main supply from the Mutha Right Bank Canal, and is, therefore, incorporated in the system.

Kadwa River Works.

186. The Waghad Tank, with an earthen dam having a maximum height of 96 feet, is the main feature of this small scheme, and it feeds the Palkhed, Ojhar Tambat and Wadali Canals. On account of the failure of the late rains the agricultural results fell below the average.

Works under construction.

Pravara River Works.

187. This system, which is still under construction, comprises (i) a storage reservoir called Lake Arthur Hill on the Pravara river at Bhandardara (near the foot of Mount Kalsubai), 29 miles by road from Igatpuri, (ii) a pick-up weir at Ojhar, 50 miles down the river, and (iii) two canals taking off from the weir, one on each bank of the river, named the Pravara Right and Left Bank Canals, 33 miles and 48 miles long respectively.

188. The masonry dam will be 270 feet high and about 1,600 feet long. It was started in 1911, and has now reached a height of about 230 feet. When completed the storage will amount to 10,831 million cubic feet (to be increased to 12,394 million cubic feet when required) and will irrigate some of the lands most affected by famine in the Ahmednagar Collectorate. The culturable area under command is 1,82,976 acres of which 57,000 acres are expected to be irrigated annually and 75,000 acres when the storage is increased.

189. Owing to outbreak of plague at and near Bhandardara during the working season, the progress of the work suffered seriously and the output of masonry in the dam amounted only to 10 lakhs of cubic feet during the year. The work on the canals is almost completed and it is anticipated that the whole scheme will be completed in about 1924.

190. As work progresses irrigation is being extended. A large sugar factory owned by the Belapur Company has already started operations near Belapur Railway Station. This concern will eventually bring about 2,000 acres under sugarcane every year out of about 6,000 acres which the Company have acquired. The area of all crops irrigated by these canals during the year was about 35,000 acres (of which about 1,000 acres represent

sugarcane) as against 26,500 acres in the preceding year; the gross revenue was over Rs. 1,73,000 and the probable net revenue will be about Rs. 1,03,000.

191. The total estimated cost of the scheme is Rs. 151 lakhs, inclusive of Establishment and Tools and Plant charges, etc., or Rs. 114 lakhs for works alone. The expenditure incurred during the year on "works" was over 7½ lakhs of rupees, bringing up the total up to date for "works" to about 89 lakhs of rupees.

192. Investigations are afoot for providing a balancing tank of a sufficient capacity as near the canal head works as possible, as the existing basin at the Ojhar pick-up weir is too small to meet requirements. The possibility of developing hydro-electric power, both at the foot of the dam at Bhandardara and at a point a little lower down the river, where a natural fall of about 200 feet exists, is also receiving attention; a total of 5,000 E.H.P. seems by no means improbable.

193. This is comparatively a small irrigation system in the Nasik Collectorate comprising a storage called the Chankapur Tank and the Girna Left Bank Canal about 19 miles long. The tank lies on the Girna river, a tributary of the Tapti river, and is formed by a masonry dam 140 feet high. The total culturable area commanded by the canal is 25,300 acres. Girna River Works.

194. The are irrigated during the year was over 5,600 acres and the gross assessed revenue was nearly Rs. 31,300 and the probable net revenue will be about Rs. 10,000.

195. This irrigation work will, when completed, be the largest in the Deccan. Though the canal will depend for its supply upon a storage near Poona, and will pass through the northern tracts of the Satara Collectorate and the Phaltan State, it will mainly benefit the western portion of the Sholapur Collectorate which is very liable to famine. New Masonry Dam at Bhatghar and the Nira Right Bank Canal.

196. The project comprises the construction of a larger dam at Bhatghar to replace the existing dam, as stated in the paragraph regarding the Nira Left Bank Canal, so as to increase the storage from about 5,300 to about 24,000 million cubic feet, with a view to provide a supply to both the old Left Bank Canal and the new Right Bank Canal. The latter starts from the head-works at Vir, some 17 miles below the Bhatghar storage, and will end near Mohod in the Sholapur Collectorate, the total length being about 110 miles but will supply water through distributaries up to Pandharpur.

197. The works were started in 1912 and, though they passed through various vicissitudes consequent on the war, the improvement made in the progress of the construction in more recent times makes it possible to hope that irrigation will be commenced in 1924 or thereabouts.

198. A volume of about 26 lakhs of cubic feet of masonry was added to the dam during the year, bringing the total up to date to about 123 lakhs and leaving a balance of 92 lakhs. If there be no set back it is expected to complete the dam in the year 1926, and the canal also at about the same time in the upper 90 miles which were taken in hand first.

199. Due to the insufficiency of the amount of the sanctioned estimate, chiefly owing to the conditions arising out of the war, a revised estimate amounting to Rs. 4,91,10,860 inclusive of all charges has been provisionally sanctioned by the Secretary of State since the close of the year.

200. The total expenditure incurred on works alone during the year amounted to a little over 25 lakhs of rupees, bringing the total outlay on works up to date to about 177 lakhs of rupees against the estimated cost (of works alone) of Rs. 384 lakhs.

201. The storage at Bhatghar will provide sufficient head and discharge to produce electrical energy of over 3,000 Horse Power at the foot of the dam. Part of this energy is already available and some of it is being utilized for driving all the machinery used for construction, such as mortar mills, stone crushers, workshop plant, etc., and for lighting and other purposes, the installation consisting of 4 units of 256 Kilowatts each, the voltage being 2,000.

202. It may be noted here that as the Bhatghar Dam will not permit of the full use being made of the water available from the Nira River system for irrigation, an amplification of the Nira Right Bank Canal Project has recently been prepared under the title of Nira Valley Development Project, which inclusive of the previous scheme amounts to about 6¼ crores of rupees. This enlarged scheme aims at bringing larger areas under irrigation on the Nira Right Bank and Left Bank Canals with the aid of a new stoarge work on the Nira River at Vir. Nira Valley Development Project.

(*ii*) Works for which only Revenue Accounts are kept.

203. These include numerous *bandharas* or weirs built across small streams to raise the level of the water sufficiently high to enable it to command the lands to be irrigated. In all there are about 300 of these small works in the Nasik Collectorate alone, and there

is also a large number in West Khandesh. The outlay on repairs and improvements amounted to about Rs. 42,000 during the year.

204. The supply of water from these *bandharas* was inadequate during the year and the agricultural results suffered thereby, and consequently remissions amounting to Rs. 85,100 had to be granted.

(*iii*) GENERAL.

205. The year under review was a peculiar one. The rains started unusually late and stopped early, and at first the outlook was gloomy, especially as due to an early draw-off from the storages in the previous cold weather the balance of supply at the end of the cold weather was limited; it was with the greatest difficulty, and after a most anxious time, that the water available could be made to last out until the break of the monsoon. Plantation of sugarcane had to be curtailed on the Mutha Canals and only a small increase could be allowed on the Godavari Canals. The rabi season opened well with good general rain in October, but the November rains failed completely and the usual rush for canal water was experienced; as a consequence the irrigation of rabi crops on the Nira, Mutha and Pravara Canals had to be restricted to the upper reaches of the canals. On the Godavari Canals, although an area of about 22,700 acres of rabi crops was ultimately sanctioned, this did not satisfy all, though it went a long way towards meeting the demand.

206. In the Ahmednagar District the condition of the people in general has greatly improved since the advent of the Godavari and Pravara Canals and the consequent establishment of the sugarcane industry. The labouring classes earn good wages, and on account of the scantiness of the local supply a large number of outsiders visit the sugarcane areas; labour finds employment the whole year round.

207. It is worth recording that, in new canal areas, rentals of lands in which sugarcane is grown has increased from 10 times the assessment in 1915 to 50 times in 1920-1921. Bearing in mind that the sale value of land is generally 12 times the annual rental, the value of cane lands has risen from 120 to 600 assessments. However, as the area of cane lands sold is small as compared with the sales of other lands, the average increase in the value of lands in general is not so marked.

208. It has been decided to introduce the "perennial block" system of irrigation on the Godavari and Pravara Canals in the years 1925 and 1926, and accordingly the classification of fields according to the nature of soil, etc., is in progress.

209. Experiments are being made on the Nira and Pravara Canals in entrusting the cultivators themselves with the distribution of water to their fields. The most important of these experiments is that being carried out with the aid of a Venturi Meter on an area of about 450 acres on the Nira Canal at Malegaon, where a regular organization has been possible. The progress of all these experiments is being watched with interest.

4.—SOUTHERN DIVISION.

(*i*) WORKS FOR WHICH CAPITAL ACCOUNTS ARE KEPT.

210. The area irrigated and the gross assessed revenue on the irrigation works under this head during the year were about 18,000 acres and Rs. 81,900 respectively. The area irrigated shows a decrease of nearly 4 per cent. while the assessed revenue shows an increase of 4 per cent. when compared with the averages of the previous three years. The decrease in the irrigated area is due to the fact that owing to seasonal and suitably distributed rain in October and November the demand for water during the rabi season was less than in the previous years. The slight increase in the assessed revenue during the year is due to the fact that in 1919-20 there was a falling off in the assessed revenue due to decrease in the high rated crops such as sugarcane, etc.

Gokak Canal.

211. The Gokak Canal is the most important of the irrigation works in the Southern Division. This irrigation system consists of a reservoir formed by a masonry weir across the Ghataprabha river at Dhupdal in the Belgaum District and a short length of canal taking off this reservoir.

212. The level of water in the Dhupdal reservoir on 1st April 1921 was 14·08 feet. It fell steadily to 11·94 feet above the sill of the under sluices up to the 19th April, when the reservoir received replenishment. The highest flood of the year occurred on the 25th July when the water reached a level of 2·75 feet above the permanent crest of the weir, which is at R. L. 2008·06.

213. The weir crest (2,985 feet in length) was temporarily raised as usual at a cost of Rs. 1,677. But owing to rain in November 1921 there was a flood in the river, which damaged the wall. This damage was subsequently repaired at a cost of Rs. 1,108.

214. The rainfall of the year was an average one, but it was irregular in the kharif season and consequently there was considerable demand for water during that season.

Owing to timely and well distributed rain in October and November the demand for water in the rabi season was less than in the previous year. The area irrigated and the assessment during the year was 10,359 acres and Rs. 47,780 respectively against 13,051 acres and Rs. 58,229 of the previous year and 10,232 acres and Rs. 48,116, the average of the past three years. The decrease in the area irrigated when compared with the corresponding figure of 1920-1921 is due to the fact that in that year there was a great demand for water because of the entire failure of the autumn rains. The fall in the assessment as compared with the average of the past three years is due to a slight decrease in the area under highly rated crops.

215. The cotton mills at Gokak and the M. and S. M. Railway Company were supplied with water according to agreements. The amount received from the cotton mills for the water supply was Rs. 14,313 and the charges recovered from the railway were at the rate of one anna for each engine watered and two annas a day for water supplied to the passengers. A reduced discharge was however given to the mills at the request of the Mills Manager from 15th March to 18th June 1921, owing to the low water level in the reservoir.

216. The monsoon of the year was favourable. It gave a steady supply of water to the canal and the tanks depending on it. The canal was open from 22nd June to 31st December 1921. The approximate area irrigated and the assessment during the year was 5,600 acres and Rs. 23,000 respectively. Dharma Canal.

217. The remaining works are a few small tanks chiefly in the Dharwar District. They irrigate from 50 to 600 acres. Other tanks.

(*ii*) Works for which only Revenue Accounts are kept.

218. Most of the irrigation works under this head are in the Dharwar District and they chiefly supplement rainfall and irrigate rice during the periods when rain is holding off. During the year 53 tanks were repaired at a total cost of Rs. 58,660, the average expenditure on such repairs during the previous triennium being Rs. 40,000.

219. The total area irrigated by these small tanks was nearly 98,600 acres and the irrigation share of the consolidated assessment amounted to a little over Rs. 3,02,600.

5.—SCIENTIFIC WORKS.

(*a*) Engineering questions that have arisen.

220. Observations to ascertain losses by evaporation and absorption were made by means of iron tanks in certain tanks and reservoirs and the results are published in the "Annual Report of supplies of water available for irrigation works, etc., for 1921."

(*b*) Special Irrigation District.

221. This charge deals with scientific investigations in connection with various problems related to irrigation from the Deccan Canals. The investigations are conducted in laboratories and on canals, experimental farms and private fields. The main problem has been to reclaim lands rendered unfit for cultivation due to water-logging and salt efflorescense, and to prevent the occurrence of these evils especially in areas where sugarcane is grown. It has now been proved that the worst affected lands can be completely regenerated at a comparatively small cost by means of a well considered system of permanent drains, combined, in the first few years, with the restoration of the physical texture of the soil with the aid of surface-washing or leaching of the salts, suitable initial plantations, green manuring, admixture of coarse vegetable matter, etc.

222. The preventive measures against deterioration of land are based on lessons learnt from reclamation work. As the nature of the subsoil decides whether any artificial drainage is required or not and how it is to be carried out, extensive subsoil surveys are in progress.

223. The field of operations, which also includes observations of levels of water in wells, covers the areas commanded by the several open canals as well by those under development or construction; several reclamation schemes have already been prepared and a few carried out. An important departure recently introduced is the execution of such schemes on co-operative lines *i. e.* the owners of the lands joining to finance the scheme and Government providing the investigating and constructing agency. The idea of utilizing the drainage water for irrigation purposes, as far as its salt contents will permit, is embodied in the schemes.

224. Another interesting investigation being conducted by the Special Irrigation District is with regard to the value of sewage effluent as a manure for various crops. For this purpose the effluent from the Poona city sewerage is conveyed through pipes to a farm where it is diluted with canal water and distributed both to experimental fields and to private lands. It is satisfactory to be able to record that the effluent has proved a

very valuable form of manure, which the people greatly appreciate. It is observed that no deterioration in the physical condition of the soil is caused and that the out-turn from crops is in no way inferior to that obtained by other methods of manuring. The effluent farm has now an area of 64 acres, of which about 40 acres came under effluent treatment during the year, in addition to some 280 acres of private land.

225. The effluent farm possesses a turbine of 6 Horse Power installed on a fall of 10 feet occurring in an irrigation channel. With the aid of this power all the cane grown on the farm and some grown on private lands is crushed, and it is also to be used for pumping purposes. The experience gained at the farm is being made use of in providing such small falls wherever possible on the Nira Right Bank Canal system with a view to the utilization thereof for driving agricultural machinery.

226. Several other matters connected with irrigation also receive attention at the farm, such as duties of various crops, experiments with water measuring devices, etc., and it is worthy of note that an up-to-date Hydraulic Testing Station, where meters, modules, etc., used on irrigation channels will be tested, is under construction.

(c) River Gauging.

227. The gauging of several of the rivers in the Presidency proper, the waters of which give any promise of the possibility of the utilization thereof for irrigation purposes, was continued during the year. Experiments to ascertain the quantity of silt contained in the waters of several rivers were also made. The results of these observations and experiments are published in the "Annual Report of supplies of water available for irrigation works, etc., for 1921."

228. Several rain gauges were also maintained as usual by the Executive Engineers concerned.

* Measured on 25th February.
† Estimated rainfall in the catchment.
‡ As reported by the Superintending Engineer, Deccan Irrigation Division
(a) The culturable and irrigable areas commanded as given in the second revised project of the Pravara River Works are 1,82,976 and 57,000 acres, respectively, these include the old areas (culturable and irrigable at present) under Lakhi Canal, viz., 25,536 and 11,780 acres, respectively. The balance is distributed between the two Pravara canals in proportion to their gross commands.

(b) These figures are for the whole project.
(c) These figures do not include the amount of widening the Nira Left Bank Canal.
(d) As actually completed.
(e) Includes the Girna Left Bank Canal extension as irrigation has begun on the extension.

Note.—As irrigation has begun on the extended Pravara Left Bank Canal figures shown in the statement are for the new canal. The figures for the Old Pravara Left Bank Canal are not shown.

* The catchment area of the drainage channel is 13 square miles in addition.
† At provisional F. S. L. R. L. 102·50.
‡ At original F. S. L. R. L. 100·00
§ Estimated rainfall in the catchment.
(a) Figures given in Statement I-A.
(b) The tank supplies the Girna Left Bank Canal.
(c) Above lowest foundations.
(d) Above lowest point in river bed.
(e) This area is also commanded by the Nira Left Bank Canal.
(f) Includes 381 miles of Branch Canal.
(g) The tank supplies the Pálkhed, Ojhar Támbet, and Wadali Canals and their distributaries as noted in Statement I-A.
(h) Storage available after deducting 500 m. cft. which cannot be used on account of the Poona water-supply.
(i) Includes 7,133 acres commanded by Matoba Tank.
(j) After deducting silt deposits.

P. M. JOSEPH,
Assistant Accountant General.

STATEMENT

Statement showing the Financial Results of Irrigation, Works in the

Number of Works.	Name of Works.	Mileage in operation.		Estimated cost of construction (direct and indirect).	Date of completion of work (P. W. Code II, 1915).	Date when system first came into operation.	General Financial Results to end		
		Main canals and branches.	Distributaries.				Total Capital outlay (direct and indirect).	Accumulated arrears of interest.	Accumulated surplus revenues.

I-E.

Bombay Presidency, excluding Sind, during the year 1921-1922.

Area irrigated per Cubic Foot per Second.				Basis to which the Duties of Water are calculated.		Remarks.
Discharged at Head.		Utilized.				
Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	
14	15	16	17	18	19	20
1,580·00	...	1,580·00	...	16th Jan. to 15th October .	16th October to 15th Jan. ...	Note by the Superintending Engineer, Deccan Irrigation Division.—The antique figures in brackets represent areas actually irrigated during the respective seasons and the duties have been calculated on these figures. They differ from those in Statement IV-E owing to the fact that certain areas irrigated during the rabi season are assessed in kharif papers and vice versa. In the rabi season, in addition to pure rabi crops, perennial and eight months' crops are irrigated. To obtain correct duties therefore these crops have to be added to the rabi area.

* Area under consolidated assessment.

† This includes 15 acres Hot weather irrigation.

‡51 cusecs were diverted by the Bokh feeder to fill the Bokh Reservoir and 22 cusecs were thrown into the Khari river through the Bhujwa channel.

§23 cusecs were thrown into the Khari river through Bhujwa channel during the Rabi season and 8 cusecs into the Bokh reservoir.

‖7 cusecs were allowed for leakage and for filling tanks.

**22 cusecs were allowed for filling tanks and absorption and evaporation in transit.

††Water was allowed free, *vide* G. R. No. A. I 11,540 of 26th July 1921.

Note by the Superintending Engineer, Central Division.—(1) As perennial and eight months' crops are irrigated during the rabi *season*, in order to obtain the figures of duty for the rabi season in columns 15 and 17 the areas of perennial and 8 months' crops given in Statement G irrigated in the rabi season are added to areas of rabi in column 4 and the total so obtained is divided by figures of rabi discharges in columns 11 and 13. The figures in columns 15 and 17 thus represent areas actually irrigated per cusec.

(a) The low duties are due to the fact that the proportion of sugar cane and other perennial crops to the seasonal crops is great.

(b) The low duties are due to scattered nature of irrigation.

(c) The difference between the discharge 'at head' and 'utilized' is due to canal water having been let into the Shelphal tank and also run to waste though scouring sluices.

(d) The high duties on the Shelphal tank are due partly to (1) concentration of irrigation on a small channel and consequently small losses in absorption and, mainly to (2) the fact that although the channel does not flow for days together owing to rainfall and other causes, the total discharge during a season is distributed on all the days of the season which reduces the average discharge and thus gives higher duties.

(e) Figures of utilized discharge are not available as the quantity let into Matoba Tank was not measured. Besides water was supplied for drinking purposes to the city and cantonment of Poona.

(f) An area of 28 acres is indirectly irrigated by underground percolation from the Mutha Right Bank Canal.

(g) The low duties are due to high proportion of sugar cane and other perennial crops which require a larger quantity of water and also to the fact that a large quantity of water is supplied for drinking purposes.

(h) The discharge from these tanks in the hot weather season being uncertain as well as very small has not been accounted for. The duties are calculated on an eight months basis. Even during the monsoon and rabi seasons there is no discharge from these tanks for days together and the actual number of days on which the channels were in flow have been taken for purposes of duty.

(i) The tank received very small replenishment during the monsoon season. Only one watering could be issued.

(j) The replenishment received during the rabi season was very meagre. Only one watering could be issued.

(k) The high duties are due to timely rainfall in the areas irrigated and consequently no canal water was required for irrigation.

*Area under consolidated assessment.

†This includes 15 acres Hot weather irrigation.
